EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with William Wannisky on 17 July 2005.

Please amend claims 49 and 50 to read as follows:

49. A cartridge detachably mountable to an image forming apparatus, comprising:

a first container for at least accommodating non-magnetic toner to be supplied to the image forming apparatus;

a second container for at least accommodating magnetic carrier collected from the image forming apparatus; and

a connecting portion for connecting said first container to said second container so as to permit rotation of said first container relative to said second container, which is fixed substantially non-rotatably to the image forming apparatus,

wherein said first container and said second container are detachably mountable to the image forming apparatus while said first container and said second container are connected to each other by said connecting portion,

wherein said connecting portion includes a vibrating portion for vibrating said second container with rotation of said first container,

wherein said vibrating portion includes abutment portions on said first container and said second container, respectively, and

wherein said abutment portions are abuttable to each other when said first container rotates relative to said second container.

50. A cartridge detachably mountable to an image forming apparatus, said cartridge comprising:

a developer supply container for supplying a developer to the image forming apparatus by rotation thereof;

a collecting container for containing magnetic particles collected from said image forming apparatus,

wherein said developer supply container is rotatable relative to said collecting container non-rotatably set in the image forming apparatus, and

wherein said developer supply container is provided adjacent to said collecting container and includes a magnet that effectively stirs said magnetic particles in said collecting container.

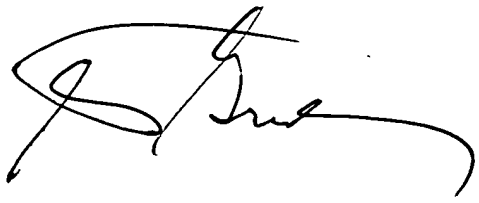

~~wherein said rotatable member includes a magnet and is provided adjacent to said collecting container.~~
